

MODIFYING FORMULA

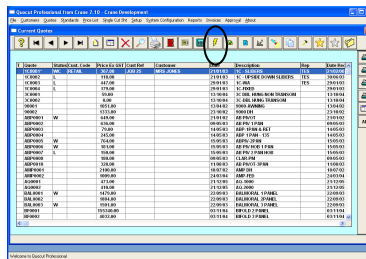

1. Modifying formula

Formula can be modified within certain parameters if individual fabrication determines the need.

Note: The following information relates to QuoCut Professional only. QuoCut Express does not allow the ability to select a record number to determine which entry needs to be modified.

STEP ONE

- Go to Quotes | Current & create a test quote for the item to be modified
- Add the item and **SAVE** then go to Cutting list and print an Item List

- Record the dimensions required to suit individual fabrication

STEP TWO

- Calculate the quote and select the B.O.M

- Check the Bill of Materials for the sections that need to be modified by referring to the Item List and note the record number on the Item List

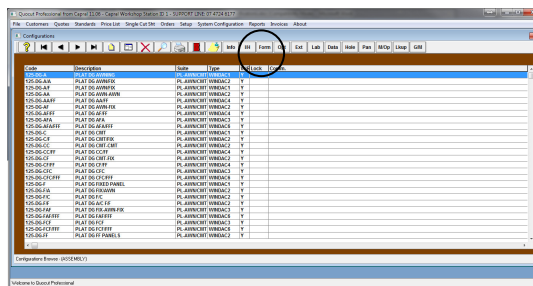

Item	Stock Code	Stock Description	Qty	Amount	Material	Cost	Price	Pct Markup	Type	Record Number
1	10002	1000 1000 1000 1000	1.00	1000.00	1000	0.00	0.00	0	A	10002

MODIFYING FORMULA

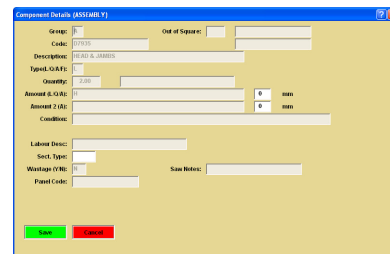

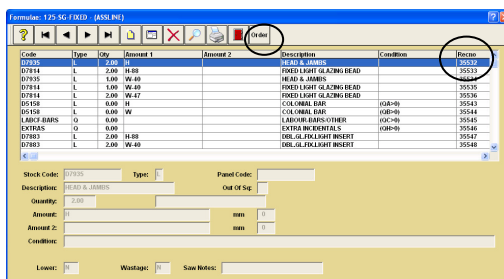

Note – This record number is stored in the formula of the configuration and will help determine the correct entry to be modified

STEP THREE

- Go Setup | Configurations
- Select the configuration to be modified
- Select <Form>

- Select <Order> - this will put all sections in alphabetical order
- Locate Record No (Recno)
- Select View/Modify

- Put the calculation difference into the field beside the formula. (Note - glass will have a height and width formula and any change should be relevant to either height and/or width)

Note – a minus sign will calculate the length shorter, a positive will calculate the length longer. (e.g. 5mm shorter should be -5 and 5mm longer should be 5). The system will calculate the section from the formula and then add or subtract the customised modification.

- SAVE and REPEAT AS REQUIRED

STEP FOUR

- Go back to the quotation item and preview the Item list
- Check that the changes are as required
