

SECURITY MODULE

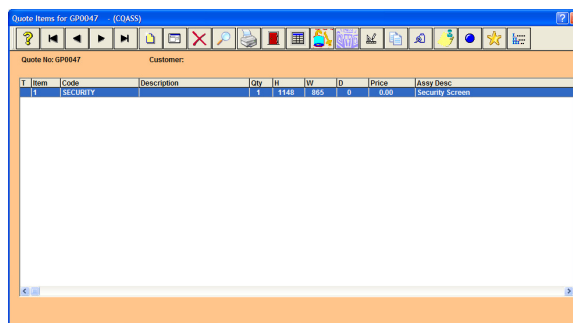

QuoCut Professional offers the functionality of pricing security for a window or door from a Pre-set Configuration or as a separate item.

Pre-set Configurations operate the same way as the configurations for all other products except you select it from within the security module. Labour and markups for these configurations are managed through the Configuration Types screen.

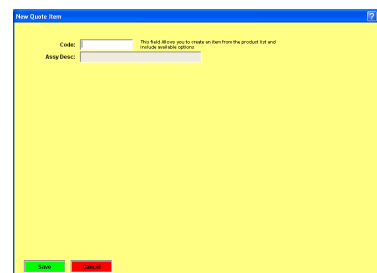

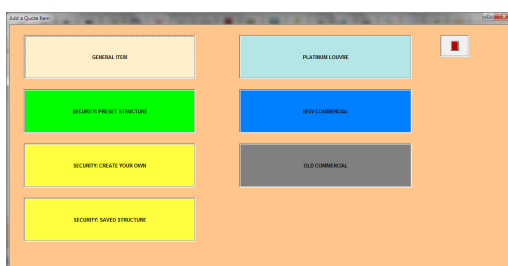

Security quote item – Preset Configurations

Preset Configurations are recommended as the option for doing individual security items.

- To add security to a quotation – select Items

- Select Preset Configuration and then select the appropriate configuration from the code box and save. Proceed with your item and quotation as normal.

NOTE: Only licensed Amplimesh dealers have access to the Supascreen configurations and licensed Own Brand dealers have access to the Ownbrand configurations.
